Apteco FastStats Analyser Standard Course

Main Course Content

Delegates will gain a good understanding of the basic concepts and functionality of the Apteco FastStats software.

- Introduction – what FastStats is and the software interface
- Queries & logic – working through the selection process
- Data Grids – displaying record data
- Cubes – using multi-dimensional crosstabs
- Trees – using a nested representation of variable data
- Charting – creating graphical data displays
- Word Cloud – visualising textual data
- Venn Diagrams – looking at the crossover between data groups
- Export – the format and output process of data

Pre-requisites

Delegates should have a sound knowledge of the MS Windows environment. MS Excel would be useful but is not essential.

2 online sessions of approx. 3.5 hours/session
