Apteco FastStats Installation and Admin Course

Main Course Content

Delegates will learn how to install, configure and update the FastStats.NET applications and services.

- Server requirements & system architecture
- Installation of pre-requisites
- Installation of the FastStats.NET configuration utility
- Creation of the Web Service database
- Installation and configuration of the FastStats Web Service
- Installation and configuration of the FastStats Service
- Installation of the Client interface
- Configuration of the FastStats Launcher application (optional)
- Installation and configuration of the Cascade module (optional)
- System Administration Tasks; create and configure users and user access
- Security considerations

Pre-requisites

Delegates should have Server Administrative experience (setting up Users/Groups Security settings etc.) Experience with IIS (Internet Information Services) an advantage, but not necessary. Access to the servers (either physically or via RDC) allocated for the FastStats System and Web Service with administrative privileges is necessary. If the system to be installed is a Client system, this should have been built and made available (through Designer).

2 online sessions of approx. 3.5 hours/session
